

DESAL harion 55

ELYSATOR Eng. AG™

Replaceable cartridge
for water softening

- Decalcifies water
- Prevents scale build-up

- Improves efficiency
- Cost advantage over desalination

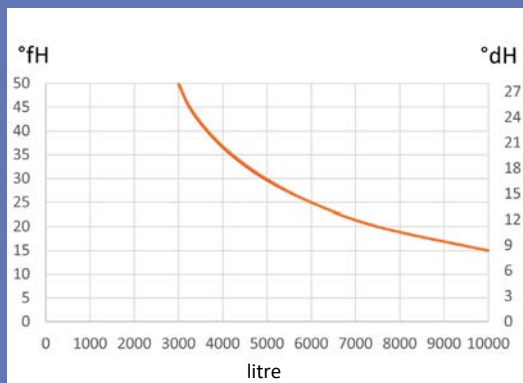

EFFICIENT SOFTENING OF YOUR WATER

The H₂O DESAL® harion 55 cartridge set decalcifies the circulating water and thereby effectively prevents the build-up of scale. These deposits could otherwise impair the efficiency of the system.

The additional filtering removes solids from the water. Softening ensures that no limescale is deposited, which extends the service life of the system. H₂O DESAL® harion 55 is suitable for "saline operation" and complies with the VDI 2035 guidelines. It is also recommended by a number of well-known heat generator manufacturers.

An integrated solids depth filter ensures clear water, so the H₂O DESAL® harion 55 cartridge set can also be used for subsequent softening. The system is easy to use and particularly suitable for large local and district heating supply networks. Can also be used in the cleaning industry.

H₂O DESAL® harion 55

Capacity: 150,000 °fH
84,000 °dH

Capacity: 7500 l at 20 °fH
8400 l at 10 °dH

H₂O DESAL® harion 55

The cartridge set for larger systems, which can be used in the PUROTAP® leader. Either fill the system by feeding in raw water or by using a pump in the bypass flow, since the product can also be used without interruption to operation. A single cartridge set has a very high capacity of approx. 150,000 °fH / 84,000 °dH. The cartridge set can be monitored using total hardness measuring strips.
